

Review of Health Assessment Across the Lifespan

April 2, 2016

Format

 In Person

Overview

This one-day course will review health assessment using a systems approach and will include how to do a head to toe assessment. Participants will practice focused health assessments in a simulation laboratory. This course will provide a refresher on health assessment for practicing registered nurses or nurse practitioner students or nurse practitioners who wish to review and build upon their health assessment skills. This course has been developed with experts in the fields of nurse practitioner practice and education. An opportunity to learn about newborn and toddler health assessment will be offered in an afternoon session for participants interested in these populations.

Course Objectives

To increase learners':

1. Confidence when performing physical assessments.
2. Ability to perform a focused health assessments so they can perform a comprehensive head to toe assessment on clients across the lifespan.
3. Understanding of normal and abnormal physical findings.
4. Ability to perform advanced assessments.

Target Audience

Registered Nurses wishing to refresh/review their health assessment skills, Nurse Practitioner students and practicing Nurse Practitioners.

The Centre for Professional Development at Bloomberg Faculty of Nursing at the University of Toronto is pleased to offer this program.
